EDUCATION

Asia Pacific University of Technology and Innovation (APU)

B.CompSc (Hons) Data Analytics

Second Class Upper

June 2023 – May 2025

MARA Professional College Beranang

Diploma in Computer Science

Second Class Upper

May 2019 – November 2021

EXPERIENCE

Data Engineer (ETL Focus)

InsiteMY Innovations Sdn Bhd

December 2021 – January 2023

Kuala Lumpur

- Built ETL pipelines using SSIS and SQL Server for two banking clients (BIMB, AmBank), supporting regulatory reporting and saving an estimated 10+ hours of manual processing per reporting cycle.
- Translated Bank Negara Malaysia compliance requirements into SQL data models, supporting three reporting systems (DQF, STATSMART, ISS).
- Built data validation checks and worked with QA teams to verify pipeline outputs before compliance audits.

Analytics Engineering Intern

ResMed Malaysia

May 2024 – Aug. 2024

Kuala Lumpur

- Built 5 dbt transformation models to migrate Oracle ERP data into Snowflake, improving data accessibility for analytics teams.
- Used Jinja templating in dbt to standardise SQL logic across models, reducing duplicated code.
- Worked in Git-based branching workflows and Agile sprints, contributing to CI/CD-aligned release cycles.

PROJECTS

Malaysian School Performance Pipeline | *Python, Airflow, dbt, PostgreSQL, Docker*

Personal Project

- Built a 3-layer Medallion Architecture (Bronze/Silver/Gold) in PostgreSQL, processing 18,374 education records across 441 districts and 16 states and reduced dataset size by from 18,374 to 4,060 rows.
- Built 2 Apache Airflow DAGs to automate ingestion from a REST API and transformation via dbt, running end-to-end in 5-8 minutes.
- Designed a composite scoring algorithm ranking 441 districts across 4 weighted dimensions
- Built an interactive Power BI dashboard with 6 visualizations, drill-through, and 3 slicers for district-level comparison.

Weather and Flight Pipeline | *Python, SQL, Power BI, AWS S3, Docker, Git*

Personal Project

- Built an automated ETL pipeline extracting real-time flight data and weather data for 4 locations, landing raw data in AWS S3.
- Processed and cleaned data using Python and pandas, then loaded it into SQL Server across 6 database tables
- Built 4 dbt transformation models to create analytics-ready tables, visualized through a Power BI dashboard with 4 key metrics.
- Orchestrated the full pipeline with Apache Airflow on a 6-hour automated schedule

TECHNICAL SKILLS

Pipeline and Orchestration: Apache Airflow, dbt, SSIS, ELT/ETL Design

Data Stores: Snowflake, PostgreSQL, SQL Server, AWS S3, Redshift

Processing and Languages: Python, SQL, Pandas, Apache Spark

Tools: Docker, Docker Compose, Git, Power BI, Tableau
